Automated Structural Biology Intelligence Platform & Monetization Roadmap

1. 🎯 Top Structural Biology Highlights (Sample Digest)

Automated output generated by ingest.py (Llama 3.1 8B Triage) & newsletter.py (Llama 3.1 70B Visual Summarizer):

1. PDB 10DT — Human Wild-Type Fgr Kinase SH3-SH2-Linker Domains

PMID: 42301812 | Oncology Target (Acute Myeloid Leukemia)

TL;DR: Restricting regulatory domain dynamics shifts Fgr kinase into a closed autoinhibited ensemble, increasing ATP-site inhibitor potency and impairing leukemogenic bone marrow engraftment in vivo.

```
+-----+ ---> [Intramolecular SH3 Engagement]
| Closed Conformation | ---> [Increased Km for ATP]
+-----+ ---> [Enhanced Inhibitor Sensitivity]
```

2. PDB 10EC — Phage Bas18 C12 Portal Assembly

PMID: 42401365 | Cryo-EM Siphophage Architecture

TL;DR: Reveals a 12-fold symmetric portal assembly with a distinct G2/E2 loop insertion in the HK97 fold, dictating genome packaging and host translocation.
